

## PATIENT CONSENT FORM

Project Title: Fitonexa: AI-Assisted Physiotherapy Exercise Assessment System

Institution: Vivekanand Education Society's Institute of Technology (VESIT), Mumbai

Department: Automation and Robotics Engineering

Faculty Supervisor: Dr. Sangeetha Prasannaram, Head of Department

Participant ID (to be assigned by project team): \_\_\_\_\_

Date: \_\_\_\_\_

### PATIENT INFORMATION AND CONSENT

Dear Participant,

You are being invited to participate in a research project titled "Fitonexa" being conducted by students and faculty of Vivekanand Education Society's Institute of Technology (VESIT), Mumbai.

Before you decide whether to participate, please read the information below carefully.

#### 1. Purpose of the Project

The purpose of this project is to develop an intelligent physiotherapy assistance system that can analyze body movements during physiotherapy exercises and provide feedback regarding posture and exercise performance.

The system uses video recordings and computer vision technology to study movement patterns and calculate joint angles. This information will help train and validate machine learning models that can assist physiotherapists and patients in performing exercises correctly.

#### 2. What Participation Involves

If you agree to participate:

- Video recordings may be taken while you perform physiotherapy exercises prescribed by your physiotherapist.
- The recordings will be used to analyze body movements, posture, and joint angles.
- No additional treatment procedures will be performed as part of this project.
- The data collection process will not interfere with your ongoing physiotherapy treatment.

#### 3. Information That Will Be Collected

The project may collect:

- Video recordings of physiotherapy exercises.
- Body pose and skeletal movement information extracted from the recordings.

- Joint angle measurements and movement-related parameters.

No personal medical records unrelated to the exercise session will be collected.

#### 4. Protection of Your Privacy

We are committed to protecting your privacy and confidentiality.

The following measures will be followed:

- Your name, address, phone number, medical record number, or any other personally identifiable information will not be included in the research dataset.
- Each participant will be assigned a unique anonymous identification number.
- Your face will be blurred, masked, cropped, or otherwise anonymized before any data is used for research, demonstrations, presentations, publications, or model development.
- No identifiable images or videos of participants will be publicly shared without obtaining separate written permission.

#### 5. Data Storage and Security

- The collected data will be stored on secure, password-protected systems controlled by the project team and faculty supervisor.
- Access to the data will be restricted to authorized project members and supervising faculty only.
- Appropriate technical and administrative measures will be implemented to prevent unauthorized access, misuse, or disclosure of the data.
- The data will be retained only for the duration necessary to complete the research and academic requirements of the project.

#### 6. Use of Collected Data

The collected data will be used solely for:

- Academic research
- Machine learning model training and validation
- Project development and testing
- Educational presentations, reports, and publications in anonymized form

The data will not be sold, commercially distributed, or used for marketing purposes.

#### 7. Voluntary Participation

Your participation in this project is completely voluntary.

- You may refuse to participate without affecting your treatment in any way.

- You may withdraw your consent at any time before the data is anonymized and incorporated into the research dataset.
- Refusal to participate will not affect the services or care you receive from the clinic.

## 8. Risks and Benefits

This project involves minimal risk beyond those encountered during routine physiotherapy sessions.

While there may be no direct benefit to you, your participation may contribute to the development of technology that could improve physiotherapy assessment and rehabilitation in the future.

### CONSENT DECLARATION

I have read and understood the information provided above.

I have had the opportunity to ask questions and have received satisfactory answers.

I understand that my participation is voluntary and that I may withdraw my consent at any time without affecting my treatment.

I voluntarily agree to participate in the Fitonexa research project and consent to the collection and use of my exercise-related data as described in this document.

☐ I consent to video recording for research purposes.

☐ I understand that my face will be anonymized before any research use.

☐ I understand that my data will be used only for academic and research purposes.

☐ I have read and understood this consent form and agree to participate voluntarily.

Disclaimer:

Participation in this research project is entirely voluntary. The project is intended solely for academic and research purposes and does not provide medical diagnosis, treatment, or clinical recommendations. Participation or non-participation in this study will not affect the participant's access to healthcare services or physiotherapy treatment. All reasonable efforts will be made to protect participant privacy and maintain the confidentiality of collected data.
